

## Hysterectomy

# The new Uterusmanipulator, rigid

## For a gentle surgery

The rigid manipulator serves a simplified manipulation of the uterus at the hysterectomy. The different caps (Ceramic and Teflon) can all be used in the high frequency surgery.

- Accurate fit through caps in different sizes and types: Ceramic, Teflon
- Easy use and safe positioning
- Atraumatic closing sponge for an ideal sealing of the vagina, sterile disposable
- **New:** Teflon caps for use with ultracision
- Rotatable cap for an accurate positioning of the uterus
- Adapter available in different sizes
- Reusable and robust system
- Ideal for hysterectomy in combination with electrosurgery and ultracision
